Meeting Summary 08.19.22

- Terminology
    - Materials → which half of the words contain the ambiguous sound assignment
    - Talker A and Talker B → Attended and Unattended Talker
        - E.g., (Attended Talker) x (Materials A) x (Ambiguous “s”) x (Left Ear)
    - S-biased → more like “sh”
- Remember to include questions about participant age and gender
    - Cross check with the Munson 2011?
    - Questions about voice preference?
- Familiarize each voice with a name, or continue distinguishing by “typical male-sounding” and “typical female-sounding?”
- Have to completely randomize order usign bins
    - Bins of 8 trials, where each includes a randomly selected critical trial for the attended talker + 2 trials pulled from Sets A, B, and C → properly balances voice assignment x ear
        - ^^ *Constrained Randomization*
        - Total of 10 bins of 8; 80 trials

To Do

- **Summary: Samuel 2016**
    - What SOAs were used?
    - What was found?
    - What does this suggest for our results?
        - Benefits of implementing a SOA > 0?
- **Revise Methodology**
    - Write in a standard paper format
        - Sections!!
- **CSV file**
    - Make in R
    - **Write_CSV** in tidyverse, then write in program
        - Work with Florian’s example code
        - Make a plain table of words
        - Rename files :/

Conferences?

- U of R Poster presentation for DeKewit fellows → Sept. 30 (Meliora Weekend)
    - Need to register project!
- Human Sentence Processing (HSP) in December
    - Deadline: early December
    - 1 page abstract + references
