

- **Fellowships, grants, and scholarships for PhD**
 - Anything you know of that I should have on my radar?
- **Journals and conferences for my thesis**
 - HSP, APA, etc.?
 - I'd like to publish at least a short article if possible
 - Additional post-hoc analyses I can run on the collected data
 - My results were computationally-lacking from what I was hoping to achieve
 - Are you teaching another statistics course this spring?
- OSF, Git, LinkedIn(ew) and personal website
 - What info would you want to see on a student's personal academic website?
 - Social media presence + involvement → Should I stop living under a rock :(
 - Significance of having a professional presence online
- **PhD Applications** → next stage prep
 - Roughly when should I expect to hear back from programs
 - What exactly will I be hearing? I'm aware I should expect Interviews... with faculty?
 - What are they looking for from me through these interviews → Should **I** follow up?
 - Should I anticipate having to travel to visit schools?
 - **What sorts of questions would I prepare for?**

I've met with a few professors now and have generally been well-received (Ellen, Brad, Jessamyn, Michele, etc. over zoom), and I've been told I speak well about my interests (somehow) → Brad commented offhandedly that I shouldn't have an issue with the interview, if I get that far. I've had professors ask me about my interests/frameworks/philosophy, and what I think expected findings would be for their ongoing projects. I've also had job interview-like questions: descriptions of my experiences and emphasizing what I learned from them. I'm wondering how these things typically go and if there are unspoken boxes that are typically being ticked behind the scenes; generally these conversations have felt fairly organic but they were less formal imo

 - ...Is there anything I should prepare ahead of time to share with them?
 - **What types of questions should I ask?**
 - Interest and Future research directions of lab
 - Overarching research projects/goals currently in processor
 - Where do we want to go with it
 - What do we expect to find
 - What conferences/submission involvements are typically an annual affair
 - Program specifics ← specifically allocations between coursework and research
 - I'd like TA, even if not mandatory, and would like to learn more about the classes the PI I'll be working with teaches
 - Structure: inter-department and cross department research opportunities
 - Active collaborations
 - Funding source (is that rude? I learned some are department-funded while others are more funded by their lab)
- **PhD Applications** → moving forward
 - Should I continue applying for lab manager positions? → [LL Lab](#) + [CoLD Lab](#)
 - Spring admittance masters programs → Any I should be considering? At what point?
