

Agenda 12

12.01.22

- What has been done

- The individual lists for each part of the experiment
 - Exposure phase critical items
 - Exposure phase filler items
 - Test phase test items
- Labeled in a way that should make concatenating simple when calling lists
- Made a Master Excel file
 - Consolidated all previous visuals used for the critical items and filler item
 - Added test items
 - Tried to keep color-codes and terminology consistent across sheets
- Created a document of terminology
- Created some visual mock ups in power point
 - What is keypresses and how do I use/do it to make figures

- Project Updates

- Need to concatenate → all files called in one experiment
 - I'd like to double-check on the goal here: I know I need to have all the files listed, and they have to be blocked by which phase at least in the test trials for the within-block order randomization. What do I need to end up with (based on how the list is called by the javascript)
- Need to rename files appropriately
 - I still have my notes + websites on how you recommended I go about this, and I believe I understand what they're saying to do. However, I don't understand how to go about changing the file names in R in a way that would be more efficient than doing them by hand. In order to have the information that is unique in that file, I don't understand how they'd match up
 - If I should just do it by hand, I should be able to have these by our last meeting of the semester, and possibly all the necessary CSV files

- Honors Thesis Proposal

- First draft review → need to submit by last day of classes
 - Also need a second faculty mentor to sign off by then
- Need to go over:
 - analyses that may be used
 - Roles
 - Timeline
- I also booked a slot to possibly bring this to the writing center next Thursday
- Maybe I can bring this up at the lab meeting next Wednesday?

- HSP Abstract

- I don't have data to include at this time and I'm not sure I would be a good candidate to present a poster at this time, but might it be worth submitting an abstract?
 - I'd hopefully have some data by March, at least on the pilot lists
 - Plan to do a poster
 - Deadline is next Wednesday, 12/7
