

## ***Agenda 4***

***07.29.22***

---

- **Poster presentation**
  - Last chance for feedback/changes!
- **Filler trials**
  - How to structure? → Number of words/pairs to be most efficient
    - Can filler trials repeat? → not like critical trials
    - If I were to make 4 sets of 20 fillers (below), would cover all lists
      - 20 male filler left, 20 female nonword right
      - 20 male nonword left, 20 female filler right
      - 20 female filler left, 20 male nonword right
      - 20 female nonword left, 20 male filler right
    - In terms of the number of singular audios, I think I could do
      - 40 male fillers
      - 40 male nonword
      - 40 female fillers
      - 40 female nonwords
    - Would be no repeating fillers/nonwords between voices or in each experiment
      - *Halving that (each filler trial repeats x2) would be great*
  - Is there a better way?
