Stim Pairing
- Number of stims needed (6 S + Sh words instead of 8 per Material?)
    - Why not repeat words across Materials A and B (12 S and 12 Sh words)
    - The significance of using 8+ (why is that the minimum?)
- How to pair the words?
    - Xs/Xsh + S/Sh & S/Xs + Sh/Xsh →
        - S/Xs tends to have less of an effect in perceptual adaptation tasks than Sh/Xsh
    - Materials excel file (07.12.)
        - Pair together words that sound distinct from each other for stereo files
            - Onset sound
            - Sound before S/Sh sound
            - Sound after S/Sh sound
    - Pair together words that have the same initial sound to make the parings as similar as possible across talkers?

Catch Trials
- How to add in catch trials and words/nonwords
    - Need catch trials for attention
    - Need nonwords to confirm the participants can recongize words
    - How many catch trials?

Pilot Experiment
- Test recognition of non-ambiguous word pairings?
    - Same pairings as would be used in the experiment → confirm they are distinguishable
- Also use this as an opportunity to collect a baseline asi-ashi continuum
    - Continuum is effected by/will effect recent exposures
