- **Upcoming Deadlines**
    - *Undergraduate Biology Program <u>Poster Session</u>*
        - Tentative date: Friday 9/30, from 3:30 - 5pm

- **Check in: Exp. 1 Design**
    - Thoughts on the writeup? Any specific clarification needed?

- **Launching Exp. 1**
    - *Priority #1:*
        - Understanding prolific code
        - Proper way to order the files needed in the list (CSV file)
            - I was looking at the sample format on Slack that maryann sent me, and I'm curious how I can determine all the information I need.
            - Start direction for understanding what I would need to do?
        - Need to create the written response choices ("Word" vs "Nonword")
            - Can I just save a png of text?
    - *Down the line ~~(brain dump)~~:*
        - Duration of each trial
            - (Before and after audio)
        - Writing up instructions
            - Introduction → directly address what the experiment is comparing or stay very high level and focus on task
        - [(Stereo) Headset test at the beginning](#)
        - Types of surveys/personal data collection (e.g., IRI questionnaire, gender)
            - Nothing that would be considered sensitive!!
        - Set up email box
        - Funding?

- **Written Sections:**
    - Continue revising Experiment 1 Design doc
    - Start **prepping for analyses** → lapse models and R code
    - Can work on general introduction → include Exp. 2 plans?
        - I'd like to still shoot to include this; I actually did have two different people at the poster presentation ask about continuing this project in this direction!! It seems to be an intuitive next step and would be an idea I would love to include some work addressing

- **For next week**
    - Make CSV file(s)
    - Continue revising Experiment 1 Design doc
    - Response choice images (?) → I think I'd include that in the CSV file
    - Also look into stereo headset checks and similar [like this one](#)
